

Table 1. Brain Networks and Related Cognitive Processes^a

Network	Regions Involved	Description
Central executive network (CEN)	Dorsolateral prefrontal cortex Posterior parietal cortex	Active for demanding tasks requiring attention
Default mode network (DMN)	Posterior cingulate Posterior parietal cortex Ventromedial prefrontal cortex	Active when brain is not engaged in a specific task Controls areas including introspection, autobiographical memory, and perception of others
Salience network (SN)	Ventrolateral prefrontal cortex Anterior insula Anterior cingulate cortex	Involved with events requiring nonautomatic response and switching between the DMN and CEN
